

Delaware Vision Care

You now have the option of choosing to have digital photos taken of the back of your eyes instead of having drops. This is a better option for most patients because it:

1. eliminates side effects of drops such as blurred vision and light sensitivity.
2. is much quicker (less time in office for you).
3. provides a computer image that you are able to see.
4. is a much better record of the health of your eyes.
5. provides a permanent record of the back of your eyes.
6. allows for comparison of year to year changes.
7. allows the doctor to email photos to another doctor for consultation (with your permission) if needed.

As always, your images and medical records are completely confidential. The cost of this service is only \$15.00 above your exam fee or co pay. Most insurance companies will not pay for photos unless medically necessary. If we find that photos are medically necessary, we will bill your insurance company.

Under certain conditions such as small pupil or certain eye diseases, we may still need to dilate you pupils. The doctor will inform you if this is the case.

Signature of Patient or Guardian

I (DO\ DO NOT) wish to have routine digital photos taken of the back of my eyes
