

## DELAWARE VISION CARE

Your optometrist will decide if your eyes need to be dilated. Conditions such as diabetes, high nearsightedness, and symptoms such as flashes, floaters, and small pupils necessitate a dilated examination.

You have the option of choosing to have digital photos taken of the back of your eyes. We highly recommend a high quality digital retinal photo of the back of your eyes. Advantages include having a permanent digital record of your eyes health, as well as, something that we can compare from year to year. The photo cost is \$20.00.

Please acknowledge below your understanding of this sheet and whether you would like the photos or not. Thank you.
